This is the organizational page for the Physics Introductory Labs PHY 124 for Spring 2017.

### Instructors

- R. Lefferts
- B. Nielsen

### Director of UG Laboratory

- Zhenyue Chen
- Peter Jones
- Shilin Liu
- Youngshin Kim
- Sahand Seifnasab
- Yue Wang
- Farid Salazar
- Wong

### Teaching Assistants

- zhenyue.chen@stonybrook.edu
- peter.jones@stonybrook.edu
- shilin.liu@stonybrook.edu
- youngshin.kim.1@stonybrook.edu
- sahand.seifnasab@stonybrook.edu
- yue.wang.4@stonybrook.edu
- farid.salazarwong@stonybrook.edu

**Scope**

The scope of the introductory labs is to give an understanding of basic experimental methods applied in physical sciences. The experiments performed during the lab sessions are closely related to the topics covered in the lecture.

**Overview**

You will perform each week an experiment as indicated in the Calendar section. You have 1 hr 50 min time to perform each experiment. Each experiment will come with a manual that you can access from this webpage. Your performance in the lab session will be evaluated by your teaching assistant. The evaluation is based on the introduction of your lab report that you have to write up and submit to your TA at the beginning of the session and your performance during the experiment that includes a final written report that will be submitted in the week following the lab experiment. Please refer also to Lab Reports.

Your performance/report will count 100%, of which the introduction is worth up to 10%, toward your grade.
on the particular lab experiment. Your lab report should give the reader a chance to get a picture of the experiment and what you have done without having the lab manual in their hand. You should not copy excerpts from the manual or only refer to passages in the lab manual. The lab report has to have the following format:

- **Title sheet**
  
  Name, lab-section, TA name, partner name(s), name of experiment, date

- **Introduction** [10 pts]
  
  In your own words: briefly describe the experiment, DO NOT copy the lab manual
  
  Describe how to perform the experiment with a short sketch and text

- **Procedure** [20 pts]
  
  Describe briefly what you have done during the session

- **Data sheet** [20 pts]
  
  Include data taken which has been analyzed, clear and neat
  
  Have your TA signed your data sheet before you leave the lab

- **Analysis/Discussion** [40 pts]
  
  Graphs, calculations, uncertainty estimates

- **Conclusion** [10 pts]
  
  Brief summary of results: physics implied by the data
  
  Any caveats or comments

-------------------------------------

Σ [100 pts]

**IMPORTANT:** You have to submit your first lab report 48 hours after your lab experiment finished. Please refer to your Teaching Assistant for details. For and after your second experiment you have to submit your lab report the latest at the beginning of the next lab session following the experiment performed.

**Penalties for late submission**

Any lab report submitted after that deadline will not be considered and receive zero points for the lab experiment.

Your final grade will be an average from your single lab grades scaled by a factor that will be determined at the end of the semester. This final grade will be part of you mothercourse's grade weighted with 20%. This grade will be included in the grade of the mother-course and you receive a combined grade for PHY122 and PHY124 which will be the same for both courses.
You are required to perform each lab experiment by yourself, mostly together with a lab partner. If you need to be absent for a lab experiment you will have to provide written documentation for a significant reason to be absent, e.g., a medical note from your doctor, a written document about jury duty, and similar. You will then have the opportunity to make up the lab experiment in the dedicated make-up week. You have to arrange with your teaching assistant for a make-up session. If you are absent for a non-excusable reason your lab grade for that particular experiment will be Zero (0) points!

Calendar

The first lab sessions will take place in the week starting from Monday, January 23.

For grading policy and methods please refer to:

TBA

The [TENTATIVE until January 23] sequence of Labs in PHY 124 is the following:

Lab 0: January 23 - January 27 Introduction to the laboratory and Uncertainty, Error & Graphs. (Note: the link goes to the PHY123 webpage, but the content is the same)

Lab 1: January 30 - February 03 The Electric Field

Lab 2: February 06 - February 10 The Oscilloscope

Lab 3: February 13 - February 17 DC Circuits

February 20-24: Make-up Lab Week for Labs 1 - 3. No lab classes.

Lab 4: February 27 - March 03 Magnetic Force 1

Lab 5: March 06 - March 10 Charge-to-Mass Ratio (e/m) of the Electron

March 13 - 17: SPRING BREAK. No lab classes.

Lab 6: March 20 - March 24 Magnetic Field/Induction

Lab 7: March 27 - March 31 AC circuits

April 03 - 07: Make-up Lab Week for Labs 4 - 7. No lab classes.

Lab 8: April 10 - April 14 Optics

Lab 9: April 17 - April 21 Interference and Diffraction

Lab 10: April 24 - April 28 Atomic Spectra

May 01 - 05: Make-up Lab Week for Labs 8 - 10.
